224 874 an initiation feast when the training is ended. At the feast all people of the village may be present but they do not dance; only the professional hunters may do so. The boy who is to be initiated must not speak or move until he "feels the spirit on his head"; then he gives meat to the people. After hunters have captured game for the feast, the blood from these animals is used to smear over the bow, arrows, and spear which have been made for the novice by his tutor. [326] This is analogous to the initiation of the young blacksmith who receives blood-sprinkled tools made by the master blacksmith.

224 789 There is in connection with the life and death of the professional hunter a certain amount of ritual and precaution. The night before setting out to hunt is a time of dancing and renewal of the implements of the chase, which are kept in a house specially prepared for them. A hunter who is on the eve of departure calls in other professional hunters to share the ceremony, which includes the rubbing of the bows and other implements with palm oil. A libation of beer is poured on the bows, spears, and arrows, but no medicine-man is present. Some of the bows are never used, because they are merely the symbols of the personality and prowess of dead hunters whose names they have taken. The food and cooking pots of a hunter must never be associated with those of ordinary household use. If a hunter is following the tracks of an animal he must not point with his finger as this action will drive the animal away. The correct way to point is by use of the feathered end of an arrow. The hunter [334] must not sleep with his wife the night before setting out in quest of game.

224 782 I have frequently seen in front of the hut of a hunter a number of skulls of antelope and other animals mounted on poles arranged in circular formation (Plate XXXII, Fig. 2). These skulls seem to be trophies, which are invariably taken away by the hunter if he finds a new home. There is no reason to doubt the statement that these skulls are an offering to the spirits who give good luck in hunting, because such a belief would be in harmony with the general respect for ancestral ghosts, which are thought to influence the affairs of the living.

764 224 On several occasions, notably near Ganda and in the Cassonge country, I have seen the tombs of hunters. These are large structures built of slabs of granite laid with some symmetry. The rock tomb is invariably placed on the top of a commanding eminence of granite. The skulls of animals which the hunter has killed are piled on the top of the cairn, but I do not know whether these are the trophies

which are fixed on poles in front of the hunter's home during his lifetime (Plate XXXII, Figs. 1, 2). 764 224

There are at the funeral of a hunter special observances which will be mentioned under the heading of funeral rites.

FISHING

In the region of Elende there is fishing with both basket and line; a method of poisoning fish is also practised. Usually a male fishes with a bark line. Women catch fish by the poisoning method, and in addition to this they generally follow the procedure in which baskets are held or weighted in the stream. If the water flows swiftly men may take charge of the fishing operations. At times both men and women fish with nets. Husband and wife may not sleep together the night before fishing, as this is believed to make the male and female fish stay together at the bottom of the river. 226 462 [537]

The fishing line consists of tough green bark which is cut into strips whose length depends on the height of the river's bank. A hole is bored through the body of a grasshopper, a worm, or a grub taken from under the bark of a tree. Through this hole is passed a short stiff piece of grass about half an inch long, to which the line is attached. The fish is caught when the crosspiece of sharp grass becomes fast in its throat. [293]

When the fisher throws the line he sings: "O fish, come and take your good thing. Do not send the little fish to spoil the good thing. Better you come and take the good thing with all your strength."

In order to make fish poison the tuberous roots of a plant are taken and soaked in water until a scum rises to the top. The solid part of the poison is not given, because it would sink and the fish which ate it would remain at the bottom of the river. Therefore only the scum of this poisonous infusion is thrown in the water. The stupefied, gasping fish remain at the surface, whereupon they are seized by women who transfer them to gourds or baskets worn around their necks. Usually poison is used only in the dry season when the rivers are shallow.

Sometimes there is fishing by means of a weir (olanja) which has an opening in the middle. On the lower side of this gap a basket trap is placed.

There is no fishing by torchlight. At the coast, and along the river Kwanza I have seen heavy dugout canoes in use; these were about twenty to thirty feet long and hollowed from single trees (Plate LXXII, Figs. 1, 2). At Ambrizette I noted the use of a fishing [501]

276 The snuff is pounded and placed in a small wooden box of cylindrical
[531] shape. Usually the box is ornamented with incised, burned patterns. The Ovimbundu of Bihé add ashes of wood to their snuff, so producing a mixture called *ulelemo*. The Ovimbundu of Elende usually use the
[609] snuff without adulteration. Two main species of tobacco plants are grown.

Women smoke in all parts of Angola. The Ovimbundu do not chew tobacco, neither have I seen it so used elsewhere in Angola. Boys and girls are not allowed to smoke before the age of thirteen years.

576 In the *ombala* of the Vangangella near Ngalangi, I asked a girl
• [834] for her pipe which I desired for my collection. The interpreter took the pipe when she proffered it, explaining that, according to local custom, I had asked for the girl. If I took the proffered pipe *from her hand* I accepted her. Another social custom associated with tobacco is the passing of the communal pipe from hand to hand in the men's council house.

276 Ngonga, my interpreter, says that he has never seen an Ocimbundu
171 woman smoke hemp, but he has seen a woman of the Vangangella (people to the east of the Ovimbundu) smoking hemp. Hemp (*epangue*) is cultivated only by the Ovimbundu men who smoke it. Pure hemp is smoked in the water-pipe which is not passed from hand to hand. Only tobacco is used in communal smoking. Smoking of hemp or tobacco consists of a few deep inhalations; there is not usually a prolonged placid smoking. When hemp is placed in the bowl of the water-pipe it is covered with large grains of sand or a piece of tin. This intervening substance prevents the hot coals from coming into contact with the hemp. The object is to secure slow ignition.

DOMESTIC ANIMALS

231 The principal domestic animals are cow (*ongómbe*), ox (*ongombe*, which is also the generic name for cattle), bull (*ossúi*), sheep (*ombémbe*), goat (*okombe*), pig (*ongúlu*), dog (*ombúa*), chicken (*ossánji*) (Plates LV, LVI, LVII).

492 The transport animals, donkey, horse, and mule, are not used by the Ovimbundu of Elende and not to any extent by Ovimbundu of other parts; but in the south of Angola the Vakuanyama have sturdy ponies and well-kept mules. The ox when ridden by Portuguese is provided with a leather saddle which is very comfortable if covered with a blanket. The brass stirrups are broad and massive. Through the septum of the bullock's nostrils there is a short brass rod to the ends of which the reins are attached (Plate XXX, Fig. 1).
